

EXP N O: 10

GITHUB:PROJECT STRUCTURE & CI/CD PIPELINE

Aim:

To design and maintain a well-structured GitHub repository with proper naming conventions, and to implement a Continuous Integration and Continuous Deployment (CI/CD) pipeline using Azure DevOps for automating the build, testing, and deployment of the Student Data Management System, ensuring efficient development and improved software quality.

GitHub Project Structure

CI/CD PIPELINE IN AZURE DEVOPS

PROCEDURE:

1. Sign in to Azure DevOps

Navigate to: <https://dev.azure.com>
Select organization and project

2. Connect Repository

Link the GitHub repository to Azure DevOps
Select the SDMS repository

3. Create Pipeline

Go to Pipelines → Create Pipeline

Choose GitHub as source
Select repository

4. Configure Pipeline (YAML)

A YAML file (azure-pipelines.yml) is used for automation.

5. Define CI (Build Stage)

The following steps are executed:

- Install Node.js
- Install dependencies (npm install)
- Run tests (npm test)
- Prepare application for deployment

6. Copy Frontend to Backend

Frontend files are copied into backend:
xcopy frontend backend\public /E /I /Y

7. Archive Application

Application is compressed into a ZIP file
Stored as build artifact

8. Publish Artifacts

Artifacts are published for deployment stage

9. Run Pipeline

Click Run Pipeline
Azure executes all steps automatically

CONTINUOUS DEPLOYMENT (CD)

10. Create Release Pipeline

Add artifact from build stage
Create deployment stages

11. Deploy to Azure App Service

Use Azure Web App task
Configure:

- o Subscription
- o App name
- o Deployment package

12. Enable Triggers

Enable automatic deployment after build
Configure approvals if needed

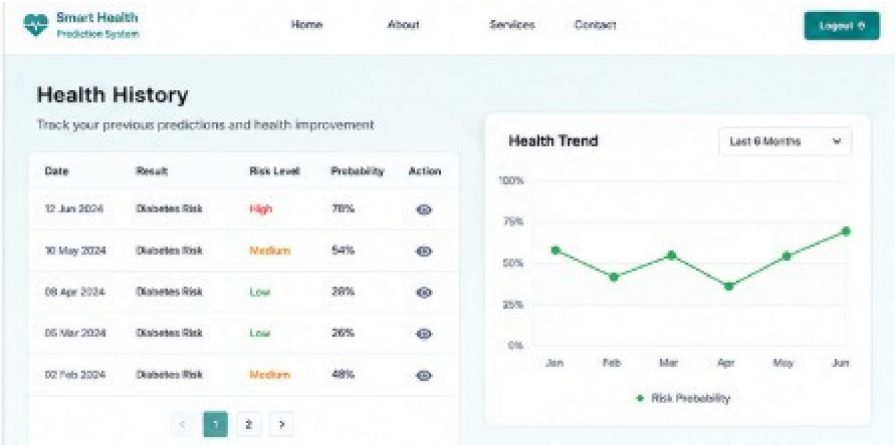

13. Monitor Pipeline

View logs for each stage
Debug errors if any

14. Maintain Pipeline

Update YAML when project changes

Ensure secure and efficient builds
